

Internship Design Proposal

Intern: Aqsa Aslam

Program: CoderAxo Web Development Internship

Offer ID: CAX-OL-2026-310

Submission Date: June 22, 2026

Career Goal

My intended career path within Computer Science is Software Engineering, with a specific focus on becoming a Java Developer. I am also building broader full-stack development skills — including MERN stack technologies — to strengthen my backend, database, and system design foundations, while continuing to grow through freelance web development projects on the side.

Learning Objectives

I aim to strengthen my practical programming skills across the full web development stack — front-end development with HTML, CSS, and JavaScript, backend development with Node.js and Express.js, database management using MongoDB, and building interactive user interfaces with React. I also want to improve my understanding of system design, API development, authentication/security practices, and professional software documentation standards.

Organization Overview & Role

CoderAxo is a web development training and internship organization that runs cohort-based internship programs focused on hands-on, project-driven learning in modern web technologies. As a Web Development Intern, I am part of the Web Development track, where I work under a mentor through structured weekly sessions, hands-on tasks, and a final full-stack project. My role involves learning and applying front-end and back-end development concepts, completing assigned coding tasks, and contributing to a complete MERN-stack application as part of a team-oriented, deadline-driven workflow.

Key Activities

- Coding
- Testing
- Documentation

Tools / Technologies to be Used

HTML5, CSS3, JavaScript (ES6+), React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Git & GitHub, JWT & bcrypt (authentication), Vite, Postman

Expected Deliverables

Weekly activity logs and progress reports, three hands-on development tasks (a personal portfolio website, a JavaScript-based To-Do application, and a deployed React application), and a complete final MERN-stack project — the Project & Team Collaboration System — including source code, database schema/ER diagram, README and API documentation, a demo video, and a final project report.

Academic Preparation

Relevant coursework from my BS Software Engineering program at COMSATS University Islamabad, including Software Construction & Development, Object-Oriented Programming, Database Systems, and Web Engineering, along with prior hands-on project and internship experience in web and software development.

Additional Comments

I'm looking forward to applying my academic foundation in a real, deadline-driven development environment and using this internship to move closer to my goal of working as a Java Developer while strengthening my full-stack skills.
