

Week 3 Activity Log

JavaScript Fundamentals & Task 1 (Personal Portfolio)

Intern: Aqsa Aslam

Program: CoderAxo Web Development Internship

Offer ID: CAX-OL-2026-310

Week Duration: June 29 – July 5, 2026

Overview

This was the first week that felt like real programming. JavaScript sessions covered the core language fundamentals, and by the end of the week the first hands-on task was assigned: build a personal portfolio website using HTML, CSS, and JavaScript.

Activities Completed

- Live session on JavaScript basics – variables (let/const), data types, operators, and control flow
- Covered functions, arrow functions, and the difference in behaviour between them
- DOM selection and manipulation – `querySelector`, `textContent`, `classList`, and creating/removing elements
- Event handling – click, submit, and input events, plus basic event listeners
- Worked with arrays and objects, including common array methods (`map`, `filter`, `forEach`)
- Task 1 assigned: build a personal portfolio site (About, Skills, Projects, Contact sections) using pure HTML/CSS/JS
- Planned the portfolio layout, gathered content and images, and started building the structure and styling
- Added a JavaScript-powered mobile navigation toggle and a simple scroll-based active-link highlight

Key Learnings

- How the DOM actually connects to the HTML tree and how JS updates it in real time
- Writing small reusable functions instead of repeating logic
- How to plan a multi-section single page site before writing any code

Notes

The portfolio task pulled together everything from the first three weeks in one project, which made it obvious how much HTML/CSS/JS depend on each other. Portfolio build was carried into the following days to polish styling and responsiveness before final submission.
