

Week 4 Activity Log

Task 2 – To-Do App (Advanced JavaScript Practice)

Intern: Aqsa Aslam

Program: CoderAxo Web Development Internship

Offer ID: CAX-OL-2026-310

Week Duration: July 6 – July 12, 2026

Overview

With the portfolio submitted, this week focused on strengthening JavaScript logic through a second hands-on task: a fully functional To-Do application.

Activities Completed

- Reviewed and reinforced JavaScript fundamentals from Week 3 through short practice exercises
- Task 2 assigned: build a To-Do App with Add Task, Delete Task, Mark as Completed, Dark/Light mode toggle, and a responsive UI
- Implemented task creation and deletion using DOM manipulation and array methods
- Implemented the 'mark as completed' feature using classList toggling and conditional styling
- Used localStorage to persist tasks across page reloads, including saving and parsing JSON data
- Built a dark/light mode toggle using CSS variables and a class switch on the body element
- Made the app layout responsive for smaller screens and tested it across different window sizes
- Debugged and refactored the code into smaller functions for readability

Key Learnings

- Working with localStorage to persist data on the client side (JSON.stringify / JSON.parse)
- Using CSS custom properties (variables) to build a theme toggle
- Writing arrow functions and cleaner event-driven code for a real interactive app

Notes

The trickiest part was keeping the localStorage array in sync with the UI every time a task was added, deleted, or marked complete – re-rendering the whole list on every change turned out to be the simplest fix.
