

Week 6 Activity Log

React Fundamentals & Final Project Briefing

Intern: Aqsa Aslam

Program: CoderAxo Web Development Internship

Offer ID: CAX-OL-2026-310

Week Duration: July 20 – July 26, 2026

Overview

This week introduced React, and midway through, CoderAxo released the guidelines for the Final Project – the Project & Team Collaboration System, to be built on the MERN stack within a 10-day window.

Activities Completed

- Live session on React fundamentals – components, JSX syntax, and the component tree
- Learned props for passing data between components and state using the useState hook
- Covered the useEffect hook for handling side effects such as data fetching
- Practiced building small component-based UIs and passing state up/down between parent and child components
- Introduced to React Router for client-side routing between pages
- Final Project guidelines received on July 25 – topic: Project & Team Collaboration System, mandatory MERN stack, submission deadline August 5
- Reviewed the full project requirements: authentication, dashboard, CRUD modules, search/filtering, security, and documentation deliverables
- Started planning the project – sketched out the database schema and the module breakdown before development began

Key Learnings

- How React's component model differs from manipulating the DOM directly with vanilla JS
- State vs props, and when re-renders actually happen
- How to break a large project brief into a realistic build plan before writing any code

Notes

Once the final project brief came in, most of the week's remaining time went into planning – required stack, modules, and a rough schedule for the 10 days ahead.
