

Week 8 Activity Log

Final Project Completion & Submission

Intern: Aqsa Aslam

Program: CoderAxo Web Development Internship

Offer ID: CAX-OL-2026-310

Week Duration: August 3 – August 9, 2026

Overview

The last full working week was dedicated almost entirely to finishing the Final Project – the Project & Team Collaboration System – and getting every submission requirement ready before the deadline.

Activities Completed

- Built out the remaining core modules: Dashboard with summary cards and activity feed, Team Management, Project CRUD, and the Task Board
- Implemented the Kanban-style task board (Todo, In Progress, Review, Completed) with drag-and-drop status updates
- Built the File Sharing module with drag-and-drop uploads for project documents
- Added the Notifications module for team and task activity alerts
- Applied security measures throughout – input validation, protected routes, authorization checks, and safe password storage
- Tested the application end to end, fixed responsive UI issues, and cleaned up the code and folder structure
- Wrote the README with setup/installation instructions, prepared the API documentation, and created the ER diagram
- Recorded the project demo video and compiled the Final Project Report, then pushed the source code to GitHub and uploaded the build to Google Drive
- Submitted the completed project ahead of the August 5 deadline and reviewed final feedback from the mentor

Key Learnings

- How to take a project from a set of separate modules to one cohesive, tested application under a tight deadline
- Writing clear technical documentation (README, API docs) that someone else could actually follow
- Prioritising which features to polish first when time is limited

Notes

The last two days were mostly documentation, testing, and fixing small bugs that only showed up once every module was connected together. Submitting the completed project with everything working was the most satisfying part of the internship so far.
